The CellSeal Automated Thawing System (ATS) consistently controls the thawing of therapies packaged in the CellSeal® Closed-System Cryogenic Vial. For cell and gene therapy professionals using CellSeal vials, the ATS standardizes the thawing process through customizable profiles and provides:

- **Safety**: dry thaw technology avoids potential water bath contamination
- **Versatility**: thaws from a variety of cryopreservation temperatures
- **Customization**: program thaw profiles for vial size and content volume
- **Standardization**: same thaw process for multiple units
- **Monitoring**: live progress readout throughout cycle
- **Traceability**: record and store thawing data using cloud-based my.Cryochain.com

The CellSeal Automated Thawing System, the difference in controlled thawing. To learn more, contact your Cook Regentec representative.
CellSeal® Automated Thawing System

Customizable, preset thaw profiles for vial size, fill volume, and thaw mode

Monitor thawing progress through live readouts

System ensures content temperature never exceeds 37°C

The CellSeal Automated Thawing System, another Cook Regentec tool to build your therapies.
