

The Difference in Therapeutics Delivery

ProFusion™ THERAPEUTIC INFUSION NEEDLE

The ProFusion Therapeutic Infusion Needle is used for intramuscular or subdermal infusion of diagnostic and therapeutic agents. The difference is evident in:

- The 1cm distal infusion segment has sideports arranged in a spiral to help uniformly deliver diagnostic and therapeutic agents
- The stainless steel needle has a trocar tip to aid with precise placement
- The needle sideports are highly visible under ultrasound to allow visualization for targeted agent delivery

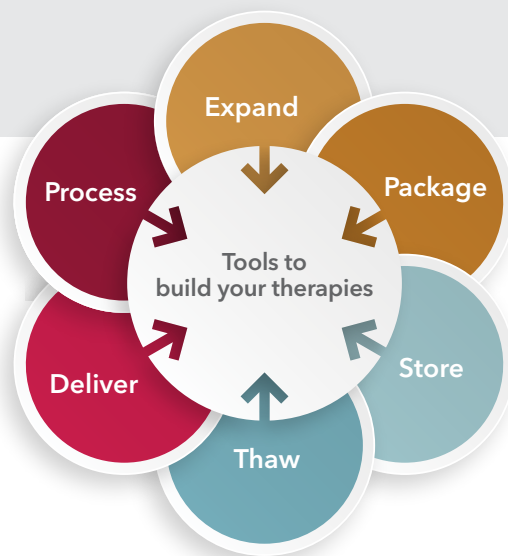

For more information about the difference in intramuscular or subdermal infusion of diagnostic and therapeutic agents, ask your Cook Regentec representative.

ProFusion™ Therapeutic Infusion Needle

Order Number	Reference Part Number	Needle Gage	Needle Length (cm)	Sideport Diameter (mm)
G47570	PTIN-19-5.0	19	5.0	0.56
G47571	PTIN-19-7.5	19	7.5	0.56
G47572	PTIN-19-10.0	19	10.0	0.56
